## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-9, 18-20, 10-17, and 21-29 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or suggest the following:
  - a. Converting the IP M/B packet into a cellular M/B request message and a M/B link access control means based upon a re-transmission request message.
  - b. Receiving by a link access controller an IP M/B packet, segmenting into a radio packet, adding sequence numbers, and transmitting a cellular IP M/B MAC protocol service data unit to a mobile terminal.
  - c. Segmenting the IP M/B packet into a radio frame size and transmitting radio frames of the IP M/B packet via a common channel to a mobile terminal.

Shaughnessy et al. discloses a wireless system using multicast addressing. However, as disclosed in column 3 lines 45-48, the connections are established using PPP. The use of PPP causes a waste of channel resources, the exact problem to be overcome by the instant application. Jiang discloses converting all wireless signaling messages to IP based messages in column 4 lines 41-43. The messages are not disclosed as M/B and the exact details of the method are not disclosed. Cheung et al. disclose a method of bridging a wireless and wired LAN. However, the disclosure focuses on determining which access point will relay information from a wireless node to a wired node. Cheung does not disclose a method for converting a M/B packet from the wired LAN into a M/B packet for the wireless LAN.
